

This edited volume is dedicated to the theory and applications of Evolutionary Computation and Fuzzy Logic for Intelligent Control, Knowledge Acquisition and Information Retrieval. It consists of 86 selected research papers from the 1999 International Conference on Computational Intelligence for Modelling, Control and Automation - CIMCA99. The goal of this conference was to provide a medium for the exchange of ideas between theoreticians and practitioners to address the important issues in computational intelligence for modelling, control and automation. The research papers presented in this book cover new techniques and applications in the following research areas: evolutionary computation; fuzzy logic and expert systems with their applications for optimization; learning, control, scheduling and multi-criteria analysis; and reliability assessment, information retrieval and knowledge acquisition.
